

## PROJECT MANAGEMENT

OUR MANY YEARS OF EXPERIENCE WITH WIND AND SOLAR POWER, DEEP GEOTHERMICS, BIOMASS AND CHP PROJECTS ENSURES A RATIONAL PROJECT STRUCTURE AND PRECISELY TARGETED IMPLEMENTATION.

We will define the aims of your project together. We will support this work with a detailed opportunity/risk analysis. Our top priority is to convert your ideas into a suitable project structure. In the process, we take all the individual planning, technical and economic framework conditions of the project into consideration.

### PROJECT STRUCTURING

Within the specific budget, we determine the resources required and recommend an expert project team consisting of planners, auditors and executing firms.

A detailed timetable provides structure for the individual project phases and ensures that the sub-projects fit together properly.

We provide support with invitations to tender, contract negotiations, and contracting individual services.

### PROFITABILITY MODELLING

Using a modular profitability model, we map your project's financing structure and determine its profitability.

The findings from the ongoing project realisation are used to constantly update the model.

### PROJECT MANAGEMENT

In the planning phase and during construction, we continuously check the project progress and quality. If necessary we implement modifications and corrections.

We respond to project risks with predictive, systematic strategies that enable us to guarantee a fast response and ensure the successful realisation of your project.

### QUALITY AND DOCUMENTATION

Upon completion of the construction phase, we ensure that all deficiencies have been eliminated and that the project documentation is complete. We then supervise the final inspection phase of the work.

### BESPOKE OFFERS

In line with your ideas and requirements, we will create a tailor-made offer for you from our range of services:

- Project structuring
- Profitability modelling
- Project management and claim management
- Acceptance inspection
- EPC management for your entire project
